The world record largemouth bass is a coveted prize for anglers, and the pursuit of it has become an obsession for many. The current record fish, caught by George Perry in 1932, weighed 22 pounds, 4 ounces, and has stood for over 90 years.

The quest for the world record largemouth bass has led to the development of new techniques and tactics, and has pushed the limits of what is possible in the sport of fishing. Anglers have spent countless hours studying the habits of largemouth bass, and have come up with new ways to attract and catch these massive fish.

The most common method for catching largemouth bass is to use live bait, such as minnows or worms. However, some anglers prefer to use artificial lures, such as crankbaits or spinnerbaits. The choice of bait or lure

depends on the conditions of the water, the time of year, and the specific location where the angler is fishing.

Once an angler has chosen a bait or lure, they must then decide where to cast their line. Largemouth bass can be found in a variety of habitats, including lakes, rivers, ponds, and canals. The best places to fish for largemouth bass are areas where there is cover, such as weeds, logs, or rocks. This cover provides the fish with a place to hide and ambush prey.

When casting their line, anglers must be careful not to spook the fish. Largemouth bass are very sensitive to noise and movement, and will quickly swim away if they are startled. Anglers should also be patient when fishing for largemouth bass. It may take several hours or even days to catch a fish, but the rewards can be great.

The quest for the world record largemouth bass is an obsession that has consumed anglers for decades. The pursuit of this elusive fish has led to the development of new techniques and tactics, and has pushed the limits of what is possible in the sport of fishing. While the world record may never be broken, the quest for it will continue to drive anglers to push their limits and pursue the biggest bass of their lives.

The History of the World Record Largemouth Bass

The world record largemouth bass has been caught in a variety of locations throughout the United States. The first world record fish was caught in Florida in 1891, and weighed 10 pounds, 10 ounces. The record was broken several times over the next few decades, and by 1932, the world record fish weighed 22 pounds, 4 ounces.

The current world record fish was caught by George Perry in 1932 in Lake Montgomery, Alabama. Perry was using a live frog as bait, and he caught the fish on a bamboo rod and reel. The fish weighed 22 pounds, 4 ounces, and has stood as the world record for over 90 years.

There have been several attempts to break the world record largemouth bass, but none have been successful. The closest anyone has come was in 2009, when a fish weighing 22 pounds, 1 ounce was caught in Lake Guntersville, Alabama. However, this fish was not caught on rod and reel, and therefore did not qualify as a world record.

The Techniques Used to Catch Largemouth Bass

There are a variety of techniques that can be used to catch largemouth bass. The most common method is to use live bait, such as minnows or worms. However, some anglers prefer to use artificial lures, such as crankbaits or spinnerbaits.

The choice of bait or lure depends on the conditions of the water, the time of year, and the specific location where the angler is fishing. For example, live bait is often more effective in murky water, while artificial lures are more effective in clear water.
